

SCHOOL COMPLEX - ALBINO, ITALY

Competition

enrico molteni architecture

Year: 2018
Site: Albino, Italy
Project: Enrico Molteni
with
Andrea Liverani

A rational, efficient and compact building is proposed. The clarity of the system is reflected in the internal distribution organization, in the logic of the structure and the construction system that is expressed in the continuity of the external facades. The functional concept, linked to the pedagogical indications of doctor Giovanni Zavalloni and those of the new framework law of 2013, envisages eliminating the corridors in favor of large areas of connection and activity according to a principle of strong flexibility and integration of use between the classrooms didactic and circulation spaces. The main entrance is a large and bright space, a space that crosses the entire building and connects the ground crosswise.
