

SCHOOL COMPLEX IN PORDENONE, ITALY

Competition

enrico molteni architecture

Year: 2019
Site: Pordenone
Project: Enrico Molteni

The architectural project is a natural consequence of the previously expressed intent. The priority for teaching spaces is to provide an almost totally free space, with the exception of the block in which vertical connection services and systems are concentrated, a flexible structure that allows multiple planimetric configurations. In the placement of the classrooms it was mainly thought of their environmental quality, with respect to the requirements of light and visual enjoyment, for this reason placed in the west along the glass façade, facing on hills. The place used to learning - intended as a relational exchange, however it is not limited only to the space inside the classrooms, but extends to the entire floor: in the deliberately wide corridors and along the vertical connection systems to then find maximum expression in the two building poles, terrace and basement.
