

NEW MARKET IN PIAZZA D'ARMI - ANCONA, ITALY

Competition

enrico molteni architecture

Year: 2019
Site: Ancona
Project: Enrico Molteni

The large building in the center of the area contains 4 distinct functions: a public arcade, commercial premises, the covered market, and the average sales structure. It is hypothesized, as required to carry out the intervention in phases.

- The first phase foresees the connection of the unevenness present in the area in order to bring the area now occupied by the former football field to have a section similar to the area south of the sports field and now used as a parking lot.
- The second phase of the intervention involves the construction of the large porch and the shops that overlook it.
- The third phase involves the construction of the covered market and the demolition of the existing market.
- The fourth phase involves the arrangement of the market square, the arrival area of the courier and the planting along Via Cristoforo Colombo.
