

SCHOOL COMPLEX IN MATELICA, ITALY

Competition

enrico molteni architecture

Year: 2019
Site: Matelica
Project: Enrico Molteni

The complex is identified as a vaulted structure developed on one floor, connective and green spaces are integrated, generating a situation of urban continuity, interspersed with green patios and "internal squares". The "internal road" - the connection space - is configured as a FLUID SPACE that occupies all that is not functionalized, integrating with these environments and socialization. The "internal road" is the innovative space set up for free education. The classroom is structured in such a way as to be able to favor an internal organization of the furniture that is not exclusively frontal, leaving the conventional arrangement. The project is based on the principles of bioclimatic architecture with particular attention to the environmental conditions. It is proposed to build the school in TERRA CRUDA.
