PARK KENNELS

Monza, Milano, Italy

The public Park Kennels in Monza has been proposed as a new model for the treatment of animals, their recovery and integration, as a new site opened to the interaction with people. A very rational and pragmatic kennel but very much combined with nature: a kind of garden where different pavilions – dogs and cats ones- are placed 45° rotated to each one into the green. A covered connection between the 4 pavilions and the main building is articulated in different canopies and a long porch. The central court yard, where all the buildings open, is proposed as a central pedestrian area with big trees.

Static structural parts of the 4 pavilions are made of wood with a constant step of 2x8 m, with external pillars. The wooden structure is repeated for 80 times as a modular system. The minimum dimension of each animal box is 3,5 closed sqm and 5,4 opened sqm, 9 sqm total area.

All the services and medical rooms are instead organized in one building, single floor, 100m long, placed to the south of the whole area. The building is built entirely in on-site cast concrete.

Plan

34

Location: Monza, Milano, Italy
 Site area: 11,300m²
 Gross floor area: 2,430m²
 Design period: 2008 - 2014
